Note about 5V Power:
– When USB is connected this will be 5V from VBUS
– When running from a battery this will be Vbatt–V_protection_diode
– Battery can only charge when USB is connected and power switch is 'ON'
Notes about GPIOs:
– ADC: GPIO1 to 10 are available as ADC0 to 9
– GPIO3 is overloaded with JTAG src
– GPIO45, 46 are bootstrapping pins

Mounting Holes

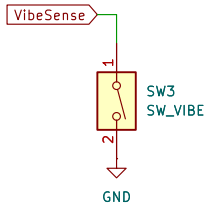

Power Switch – Battery Connector

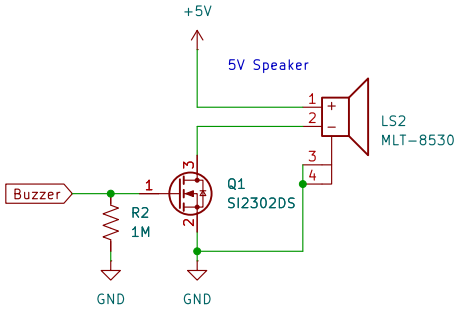

Note: This battery connector pinout seems to match standard adafruit batteries

Vibration Sensor

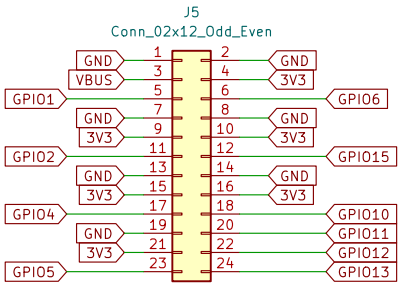

Note: Use GPIO as input with pull up to read the vibe sensor

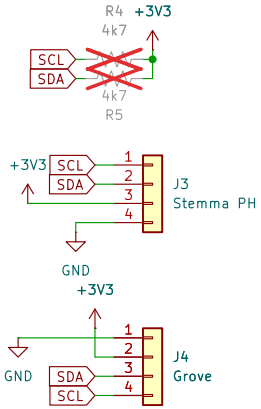

Speaker

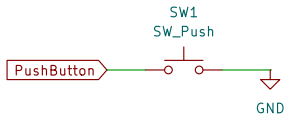

GPIO Header

I2C Connectors

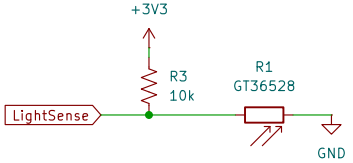

Push Button

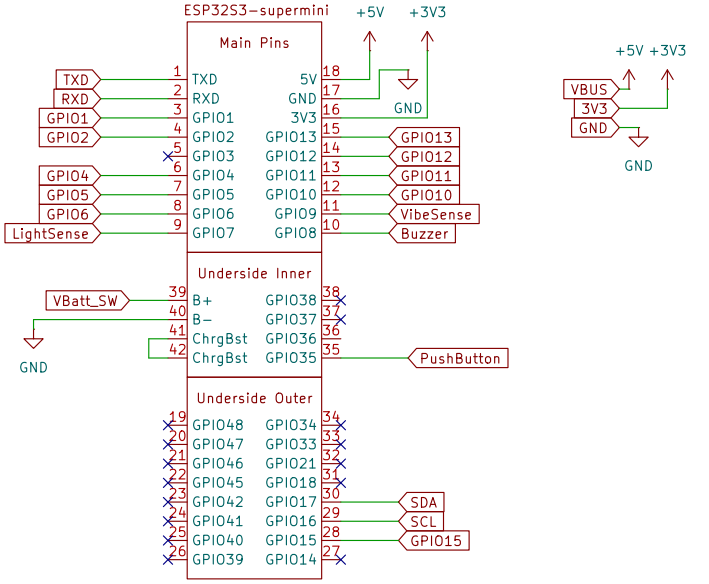

Note: Use GPIO as input with pull up to read the switch

Light Sensor

LDR is a CDS that measures:
– 500 ohms when I shine my flashlight on it
– 90k in a dim (hard to read) room
